## Information about this program package

### Anybus LWTool rev. 1.07 (demo)

This DEMO version is fully functional but configuration download to the Anybus hardware is not possible. Please contact HMS or any HMS representative to obtain the full version of LWTool.

Order details for the full LWTool version:

LWTool for Anybus X-gateway – part number: **018640**

LWTool for Anybus Communicator – part number: **018280**

Note on LWTool functionality:

LWTool configures the variable list in the Anybus module which does not contain any LonWorks variables (SNVT's) without this configuration. However, LWTool does not configure the LonWorks network itself, i.e. connecting SNVT's from different LonWork nodes. This task is carried out with a LonWorks network configurator (installation tool) such as LonMaker from Echelon.

This release contains:

1. LWTool rev. 1.07 demo (applicable for both X-gateway and Communicator)
2. Release Notes
  - a. LWTool Communicator
  - b. LWTool X-gateway

Installation requirements:

- Operating system Windows NT/2000 /XP/Vista
- Min. Pentium 200MHz, 64 MB RAM, 800\*600 resolution display in 16 bit colour mode
