1-YEAR WARRANTY

When used in the Access Point mode, the WLg-LINK-OEM is the root element of an industrial WiFi Ethernet network.

When used as a Bridge, it makes it possible to connect any Ethernet 10/100 industrial equipment to this network.

The WLg-LINK-OEM device is also designed to work as a wireless bridge between the wired MODBUS/TCP protocol and the radio network, this feature allows connecting of any MODBUS/TCP equipment to this network.

Integrators and manufacturers (point of sales, medical instrumentation, industrial automation, security systems, video surveillance, automotive, building automation ...) can right now rely on this new technology to build safety wireless network applications while freeing themselves from wiring constraints.
