

AEA 300, Analog Output Modules; 2-Channel

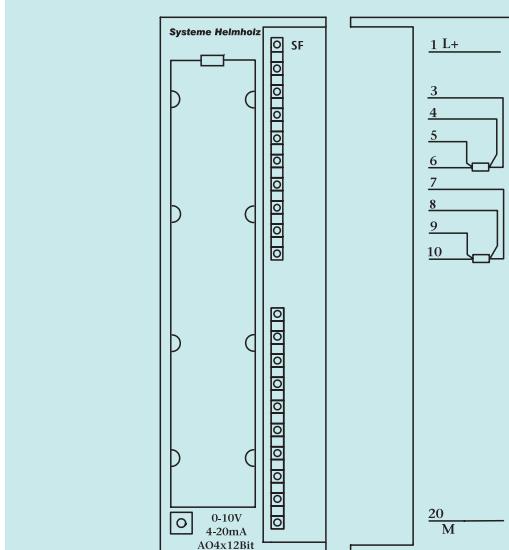

2-channel analog output module

The analog output modules from the Systeme Helmholtz GmbH convert the internal signal level of the programmable controllers to the analog signal level required for the process.

This module is suitable for connection of analog actuators for voltage and current outputs in the range up to ± 10 V or ± 20 mA.

The signal lines are connected to the corresponding front connectors. You can identify them on the labeling strip.

The modules can be fully configured with the programming software. Hardware switchover is not necessary.
