## Description

### Windows CE Board Support Package

The Windows CE image for netX comes with a free evaluation trail period of 120 days.

The Board Support Package is required to create own images with specific drivers. It contains the Windows CE operating system in source code. The development environment can be obtained from Microsoft.

### Linux Board Support Package

The Linux Board Support Package contains source files, documentation and a configuration tool to select components to create an image for the target

system. The configuration tool requires a computer running Linux.

### rcX Board Support Package

The ROM based real time kernel of the rcX operating system is available for free when downloaded from the internet.

The Board Support package includes C header files and documentation. We recommend purchasing the rcX Board Support Package. It contains drivers like a USB diagnostic interface. Together with the object files of the protocol stacks the rcX Board Support Package enables integrating own application onto the netX.

### VxWorks Board Support Package

The Board Support Package supports VxWorks 6.2. It allows developing own application in VxWorks.

The BSP includes netX specific drivers in source code. VxWorks requires a licensed development environment from WindRiver.
