

ZR-200 dial in/out Ethernet Module

The **IBH ZR-200** is a compact Ethernet-Router for industrial applications. Because of its integrated modem and its compact dimensions, it can be easily integrated into new as well existing systems.

It is available in two versions:

IBH ZR-200 A - Industrial Ethernet-Router with integrated analog Modem

IBH ZR-200 I - Industrial Ethernet-Router with integrated ISDN Modem

The Dial-IN/OUT Router **IBH ZR-200** can be applied wherever an Ethernet system is to be remotely managed via analog or ISDN dial-up lines.

The **IBH ZR-200** enables safe dialling-in via modem to a remote network by way of a standard PPP connection. The advantage of a router is in the fact that all participants of the remote network can be accessed.

Additional features are Dial on Demand, Callback and ISP-Dialling with VPN functionality.

- Integrated Analog/ISDN Modem
- 24V DC Power supply
- Space saving solution
- Configuration via integrated Web surface
- 10 status LEDs
- RJ45 ethernet connector
- ISDN-64kBit/s analog 33.6kBit/s
