

Network USB Hub (Ref 35020)

Introduction

The network USB hub is a solution to utilize USB over IP technology, making it easy to connect ProfiTrace anywhere on a 100 Mbps TCP/IP Ethernet LAN. This product eliminates the need for locally-attached host PCs or to work around the 5 meter limitation of USB cables.

The network USB hub provides 5 USB ports, which deliver the same Plug and Play user experience as the onboard USB ports. Software drivers are loaded onto a host PC or server, enabling remote devices to communicate with the host, without setting up existing ProfiTrace software. The devices can be centrally managed and monitored from a remote server or PC via an IP address. The network USB hub is compatible with every bulk or interrupt type USB devices such as bar-code scanners, printers, fingerprint scanners, mice, pole displays, card readers, harddisks and more.

Product features

Mechanical

- Dimensions: 165 x 165 x 20 mm (W x L x H)
- Ethernet: RJ45 connector
- 5 USB female ports (Type A)

Protocol and software

- Supports 15 devices
- USB 2.0
- 10/100 Base-T Ethernet support
- OS Support: Windows XP, Vista and MAC OS
- Remote configuration utility
- Software: supplied free of charge

Electrical

- Power: Auto-ranging 5V@3A PSU included

Others

- Operating temperature: 5 to 32°C
